**Early 2011 Vitas moved in to a completely new, 500 sq.m, R&D and GMP analytical lab in the newest and last building of Oslo Innovation Park. We have a comprehensive up to date scientific equipment to conduct a variety of studies. Our lab is equipped to handle advanced HPLC, GC, UV Spectrometry, Florecent Assays, ELISA, various mass spectrometric techniques and other modern techniques. The lab also has room for expansion to accomodate more scientist and equipment.**
